

1. Install FluentValidation and its ASP.NET Core integration package.

```
> FluentValidation.AspNetCore 11.3.1 11.3.1
```

4. Register the validators and confirm invalid requests now return a structured 400 response automatically.

The screenshot shows a Postman interface with a POST request to `http://localhost:5138/api/Orders`. The request body is a JSON object:

```
1 {
2   "customerId": 0,
3   "total": 100,
4   "orderDate": "2026-08-12T18:00:00Z"
5 }
```

The response is a `400 Bad Request` with the following JSON structure:

```
1 {
2   "type": "https://tools.ietf.org/html/rfc9110#section-15.5.1",
3   "title": "One or more validation errors occurred.",
4   "status": 400,
5   "errors": {
6     "CustomerId": [
7       "CustomerId must be greater than 0."
8     ]
9   },
10  "traceId": "00-b2c8fb77f294df30f24fd5196e42c702-b0300217a9517000-00"
11 }
```

5. Test each validation rule individually in Postman, confirming the specific error message returned.
