

Week 3 - Postman Collection Report

1. Postman Collection Structure: Organized all API requests into a Postman collection using folders for Happy Path and Error Path.

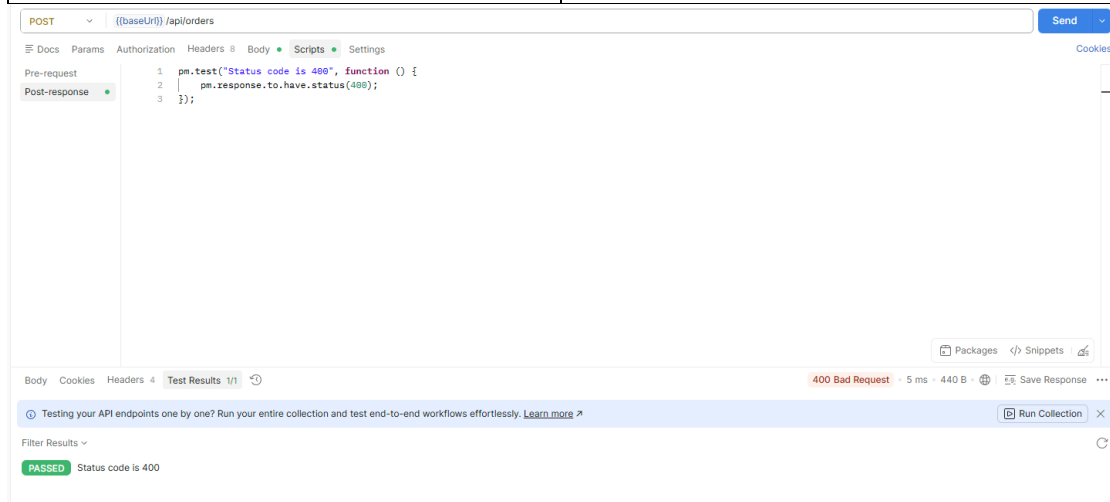

2. Happy Path Requests

Status	Endpoint
✓ 200	GET /api/orders
✓ 200	GET /api/orders/{id}
✓ 201	POST /api/orders
✓ 200	PUT /api/orders/{id}
✓ 204	DELETE /api/orders/{id}

3. Error Path Requests

Expected	Endpoint
404 ✗	GET Order - Not Found
400 ✗	Create Order - Invalid Input
404 ✗	Update Order - Not Found
404 ✗	Delete Order - Not Found

4. Test Scripts

Added automated Postman test scripts to verify response status codes.

PASSED Status code is 200

PASSED Status code is 201

PASSED Status code is 204

5. Postman Environment

```
{{baseUrl}} /api/orders/9
```

6. API Documentation

Purpose	Endpoint	Method
Get all orders	/api/orders	GET
Get order by ID	/api/orders/{id}	GET
Create order	/api/orders	POST
Update order	/api/orders/{id}	PUT
Delete order	/api/orders/{id}	DELETE

7. Week 3 Summary

During Week 3, I built and tested a RESTful API using ASP.NET Core. I created a Postman Collection, organized requests into folders, added success and error-path tests, configured environment variables using baseUrl, and verified the API responses with automated Postman test scripts.
